

Letter of Motivation

Dear Sir/Madam

My name is and I wish to apply for a student visa for Germany to pursue my higher education. Fortunately, I have gained admission to University of for the master program titled as “Energy Conversion and Management”, starting on October 4th 2016.

Looking back at my academic life, I acquired a bachelor degree in Mechanical Engineering (Fluid Mechanics and Heat Transfer) from University of, which stands among the best academic institutes in Iran. I have also been working in this area for several years and have gained a lot of practical experience.

The primary reason why I want to pursue my higher education is the fact that this program can grant me a new insight into my field of study, which is closely related to energy, as it is very constructive and tries to adopt the latest approaches to deal with issues regarding energy, which is one of the most critical and fundamental concerns of modern life. I firmly believe that in the world of modern science and technology, energy-related courses play a pivotal role not only by offering new methods to make use of green and renewable energy, but also by preserving the environment which will consequently provide everyone with a healthier place to inhabit. Besides, the world is currently faced with a serious energy crisis, as we will run out of fossil fuels as the main source of energy very soon. Therefore, there seems to be a pressing need for more experts in this area of research to devise new strategies to address the upcoming dilemma. In addition, having worked in the industry of my country for some years, I have observed that huge sums of money is allocated to cover the expenses attributed to energy, since a lot of energy is wasted on a daily basis. I hope to gain the required knowledge and expertise to minimize these costs and energy consumption by presenting the latest methods to companies in my own country.

When it comes to studying abroad, Germany is an attractive option due to a great number of reasonable grounds. First and foremost, the quality of education provided by German universities has been perfectly appreciated all around the world. In addition, Germany has been by far the most successful country in optimizing energy consumption and many other technological aspects and has always played a leading role in tackling global problems. Besides, most of the universities in Germany are almost free of charge and this provides a great opportunity for foreign students to do a post-graduate degree in this country as life expenses are similar to their own home country. Finally, I am personally interested in learning foreign languages, particularly German. Therefore, studying in this country will provide me with a unique opportunity to develop my language skills as well. Clearly, knowing a language of this significance can stand out in my resume.

The last contributing factor that motivated me to choose this program is the job prospect. I have found the subject to be highly relevant to the future and present career of mine, which is and will most probably be working in fields regarding energy conversion and consumption. I tend to become a successful researcher, working in pioneering companies in my home country, Iran, in order to come up with new ideas to facilitate the provision of energy. I am really optimistic to gain this expertise by doing a practical course in such a well-equipped university in Germany.

In conclusion, I have always known Germany as a country with a perfect system of education and the center of innovation. Besides, the major that I have chosen to study is among the most required areas of research all around the world, especially in Iran. Therefore, I believe by the help of what I will learn at University of, I will be able to better serve my country.

Thank you very much indeed for your consideration of my case in advance. I look forward to hearing from you.

Yours Faithfully

.....
